

Replast Eco › Recycled Plastic Lumber

Maintenance and Cleaning Instructions

ZERO MAINTENANCE

No painting, staining or sealing required

NO PAINTS OR STAINS

100% maintenance-free surface

25-YEAR WARRANTY

Against decay and cracking

All exterior products made with recycled plastic lumber require regular cleaning to keep surfaces looking and performing as intended throughout the lifespan of the product. Recycled Plastic Lumber is very easy to maintain and is not affected by most chemical products.

1. CLEANING INSTRUCTIONS

Simple maintenance for long-lasting performance

For basic cleaning: use a mild soap/detergent or a water/vinegar solution and a stiff-bristled brush. Rinse clean with running water.

ISSUE / STAIN TYPE	RECOMMENDED TREATMENT
Grease stains	Household grease remover
Mould	Mild soap solution
Rust	Mild soap solution
Scratches & burns	Light sanding/brushing with a stainless steel brush
Weathered surfaces (2–3 yrs)	Water + SOS pad with vigorous scrubbing — restores original appearance without sanding or refinishing
Surface oxidation / chalking	Stiff-bristled brush with mild soap solution; rinse thoroughly with water
General dirt & debris	Mild soap/detergent or water/vinegar solution; rinse clean with running water

2. POWER WASHING

Annual maintenance schedule

3. REPAIR

Addressing minor surface damage

Include an annual power-wash of your recycled plastic lumber in your maintenance schedule. Minor scratches can be repaired by using a standard electric heat-gun (or handheld acetylene torch) and a metal putty knife to heat and smoothen over the plastic.

Maintain a distance no closer than 4–5 inches from the surface.

Keep water pressure no greater than 1,200 psi.

Always test on a non-visible area first to practice the technique before applying to visible surfaces.
